Dr. Grossfeld,
Poultry Disease Officer,
Tel-Aviv

Agricultural Office,
Tulkarem
2nd July, 1941.

Subject: Poultry Diseases.
Ref: My telephone conversation.

I am sending you under
separate cover one dead chick for examination.

In the last 3 days, the chicks
after being in a satisfactory condition, started
to be seen dead in the chick school.

I am awaiting the result of
your investigation and advice.

DEPARTMENT OF AGRICULTURE & FISHERIES
DISTRICT VETERINARY SERVICE
JAFFA

4th June, 1937.

Subject :- Poultry Diseases.

Reference:- Your TK/4/7 of 1st June, 1937.

A/Principal
Kadoarie Agricultural School
Tulkarm.

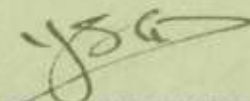

As requested poultry plant of above school was visited on the 3rd inst.

Hatch examined (the flock of 3½ months old) is suffering of Avitaminosis (Vitamin A deficiency), Coccidiosis and Tape - Worms (nodular) infestation.

The following treatment is recommended :-

1. Avitaminosis - 1% of cod liver oil added to the diet in addition to green food supplied.
2. Coccidiosis - the sour milk or milk meal ration be adopted as suggested.
3. Tapeworms - as suggested to you orally, it would be advisable to inform me about a week prior to their transference to their prospective laying houses so that they could be treated for same.

2. The last hatch of Baladi chicks should be given one dose of Epsom Salts as recommended on the spot.

Y.S. Grasovsky
POULTRY DISEASE SPECIALIST
